Submitted (MAR-2002) to the EMBL/GenBank/DDBJ databases.
-!- SIMILARITY: Belongs to peptidase family Si.
-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry win preliminary data.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PUNCTION: Transcription factor. Interacts specifically with the W box (5'-(T)TGAC(C/T)-3'), a frequently occurring elicitor-responsive cis-acting element (By similarity).
SUBCELLUIAR LOCATION: Nuclear (Probable).
SIMILARITY: Belongs to the WRKY group I family.
SIMILARITY: Contains 2 WRKY domains.
                                                                                                                                                                                                                                            10-0CT-2003 (Rel. 42, Created)
10-0CT-2003 (Rel. 44, Last sequence update)
10-0CT-2004 (Rel. 44, Last annotation update)
05-JUL_2004 (Rel. 44, Last annotation update)
Probable WRXY transcription factor 33 (WRXY DNA-binding protein 33).
Name=WRXX33 OrderedLocusNames=At2g38470; ORFNames=T19C21.4;
Arabidopsis thaliana (Mouse-ear cress).
Bukaryota; Viidiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots; rosids;
eurosids II; Brassicales; Brassicaceae; Arabidopsis.
                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STRAIN-CV.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1-carboxylate + methylthioadenosine.
-!- COFACTOR: Pyridoxal phosphate.
-!- PATHMAY: Ethylene biosynthesis; first (rate-limiting) step.
-!- SUBUNIT: Homodimer.
-!- SIMILARITY: Belongs to the class-I pyridoxal-phosphate-dependent aminotransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-AUG-1992 (Rel. 23, Last sequence update)
05-UTL-2004 (Rel. 44, Last annotation update)
1-aminocyclopropane-1-carboxylate synthase (EC 4.4.1.14) (ACC
1-aminocyclopropane-1-carboxylate synthase) (S-adenosyl-L-methionine methylthioadenosine-1yase).
Name=ACS2; Synonyms=CARACC;
Caryophyla; eudicotyledons; core eudicots;
Caryophyllaceae; Dianthus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pyridoxal phosphate (By similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HSSP; P18485; IIAX.

The present introduction retailers to 12 Secreted protein sequences given in page 18 and the protein sequences concludes the 12 secreted protein sequences given in AAA80666-A80623 encode the 12 secreted protein sequences given in the AAA816067-B25539. The human secreted proteins sequences given in dependent on the tissues in which they are expressed. Examples of the activities of the proteins include: immunosuppressant; anti-inflammatory; antiatreriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antiatreriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antigonists may be used to treat prevent and/or diagnose various disease, antagonists may be used to treat prevent and/or diagnose various disease, disorders and conditions examples of which include: immune disorders e.g. Addison's disease and nephritis; dermatitis, dermatitis, and multiple sclerosis; inflammatory disorders e.g. inflammatory bowel disease, crohn's disease and nephritis; hyperproliferative disorders e.g. coronary arteriosclerosis and purpura; cardiovascular disorders e.g. coronary arteriosclerosis and myocarditis; cancer e.g. melanoma and lymphoma. The proteins and polymucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene #11 and protein sequences are represented in sequences AAA80616 and AAB2566 Sequences AAA80677-A80682 represent genes related to the
                                                                                                                                                                                    Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, ameliforation and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        YKPQVHIQMTYPLQGLTREGDALELTCEAIGKPQPVMVTWVRVDDEMPQHAVLSGPNLFI 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in Incyte Clone 312256 from the CDNA library LUNGNTO2, which was made from RNA isolated from lung tissue. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno-superfamily protein B12 g3779242. HCSRP and its antagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such disorders include cancers such as leukaemia and melanoma, immune disorders include cancers such as leukaemia and melanoma, immune disorders such as rheumatoid arthritis, asthma and atherosclerosis, bacterial and parasitic infections and neuronal disorders such as akathesia, Alzheimer's disease, multiple sclerosis and epilepsy. Polynucleotides encoding HSCRPs may be used as hybridisation probes to diagnose these conditions. Anti-HCSRP antibodies may be used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

The present amino acid sequence is the human lymphoid derived dendritic cell addesion molecule, LDCAM. It is found on lymphoid derived dendritic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic region of B7-Li. Human LDCAM is expressed in breast, retina, foetal liver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B7L-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used to treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for prevention or reducing the effect of organ and bone marrow transplant crejection and for modulating T cell immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or cells bearing B7L-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polynucleotide (I) comprising one of 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).

(I) a useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral aclerosis, immune déficiencies, cancer, autoimnume disorders, multiple sclerosis, diabetes and alleriges. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; vulnerary; dermatological; neuroprotective; nootropic; cancer; antiparkinsonian; immunostimulant; cytostatic; immunosuppressive; antidiabetic; antiallergic; gene therapy; wound healing; tissue repair; burn; central nervous system disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; immune disorder; autoimmune disorder; multiple sclerosis; diabetes; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful for treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide and polypeptides, useful for treatment and diagnosis of Alzheimer's, Parkinson's, Huntington's, amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.

                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for detecting cell proliferative disorder associated with tumour supressor lung cancer 1 (TSLC1) in a clistociated with tumour supressor lung cancer 1 (TSLC1) in a proliferating cell with a reagent that detects level of the cell component in proliferating cell as compared with a capture of the cell component in proliferating cell as compared with a healthy cell, where modification indicates disorder associated with a healthy cell, where modification indicates disorder associated with TSLC1. The method is useful for detecting a cell proliferative disorder (e.g. liver, lung or pancreatic cancer) associated with tumour suppressor lung cancer 1 (TSLC1) in a subject. The invention is useful in gene therapy and for treating a cell proliferative disorder such as lung cancer (human non-small cell lung cancer), liver cancer (hepatocellular carcinoma) or pancreatic cancer associated with modification of TSLC1 production, where a reagent which modulates (preferably, increases) TSLC1 level in the cells, is employed. The present sequence is human TSLC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

The invention relates to an isolated nucleic molecule that is at least CC 594 identical to 18 human cDNA sequences representing 12 novel genes encoding secreted proteins or a polymuclectide fragment of the CDNA.

CC defined in the specification, its species homologue, a variant or allelic variant of the polymuclecotide having a longuage capable of the CDNA.

CC defined in the specification, its species homologue, a variant or allelic variant of the polymuclecotide having a nucleic acid molecule conditions to a mucleic acid molecule desented by physidis under conditions to a mucleic acid molecule comprise under stringent conditions to a nucleic acid molecule desented polymuclecide feagment, domain, epitope, full-length secreted polypeptide fragment, domain, epitope, full-length protein, variant, allelic variant or species homologue), antibodies that protein, variant, allelic variant or species homologue), antibodies that protein, variant, allelic variant or species homologue), preventing or ameliorating a medical condition by administering the polymucleotide or ameliorating a medical condition by administering the polymucleotide or ameliorating an activity in a biological assay (by expressing the CDNA sequence in a cell, isolating the supernatant, and detecting an activity in a biological assay (by expressing the CC dentifying an activity). The polymptides, mucleic acids and antibodies are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, such as cancer, inflammation and other immune disorders, neurological and blood clotting disorders (many examples are estruction mapping). The polymptides, mucleic acids are useful for thromosome identification), radiation hybrid mapping or long-range restriction mapping. The polymptides are also are also useful for thromosome immunological probes for differential identification of the restrictional mapping or proventing introduced as a content or other content or other contents or necentary assays. The polymptides are useful for pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 TISCOVNKSDDSVIQLLNPNRQTIYFRDFRPLKDSRFQLLNFSSSELKVSLTNVSISDEG 120

Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the cutivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating the polyment of the polyment o
                              pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating

pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SDI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

transmembrane proteins used therapeutically. The PRO proteins have evytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polymuclectides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     205

New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptors/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 145

detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation of differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also breast, prostate, rectal, cervical, or liver tumours, and also breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 204 MLKVHKEDDGVPVICQVEHPAVTGNLQTQRYLEVQYKPQVHIQMTYPLQGLTREGDALEL 263
